6. The turtles returned to the beach after the sun had set.

D. Main idea and supporting details

Read the short non-fiction text, then answer the questions in full sentences.

Hot-air balloons rise because the air inside the balloon is heated. Warm air is lighter than the cooler air around it, so the balloon begins to lift. A pilot controls the burner to make the balloon rise or descend. The wind carries the balloon across the sky, which means pilots must check weather conditions carefully before a flight. Balloons cannot be steered in exactly the same way as airplanes, so safe planning is very important.

1. What is the main idea of the text?

2. Write TWO supporting details from the text.

3. Why must balloon pilots check the weather carefully?

4. In this text, what does "descend" mean?
